			WApp	Formula checks for len() of 12 as the sheets counts the formatting dashes and is made for USA phone numbers. But the dashes are simply for clear reading and are not part of the entered number. You can change the desired number and your own country code if needed.		
			WApp	BTW, it's also great to publish it was a web page and then quickly run through it on you a phone, much faster than on a sheet. File > Publish to the web		
			WApp	I'd love to hear your thoughts on how to improve this. You can comment on this sheets or write your feedback here: https://docs.google.com/forms/d/e/1FAIpQLSd834rHCj9PZnuyobY2Dbm42aly5kj9F1A56ywgj9-eWUAAXg/viewform

Once you have the number...

Write it in this template.

Get your generated WhatsApp link.

Prepare a message.

And send it!
